

If you are interested in our survey, please click [here](#) to fill out. This document presents the questions included in the survey for informative purposes.

Our survey forms part of the Naming the Pain in Requirements Engineering (NaPiRE) initiative, started in 2012. This initiative forms a globally distributed family of replicated surveys with the goal to help the Requirements Engineering (RE) community of researchers and practitioners getting a better understanding of general industrial trends in RE and problems faced therein.

Considering software (requirements) engineering is predominantly a human-centric activity that incorporates social interactions and communication, many of the RE problems can be traced back to human factors. The main objective of this questionnaire is therefore to further deepen our understanding on practices and problems related to human factors in Requirements Engineering.

Glossary

Project team: members of the project.

You: the respondent.

Stakeholder: individuals or groups with an interest in the project. This term includes the customer.

Your project: the one main software development project that you are referring to for all the questions.

External Partners: an entity or organization that is not part of the internal team of the company but collaborates in the development process.

A. Demographics

1. In which country are you personally located?
2. How many people are involved in your project?
3. Please select the main industrial sector of your project or the application domain of the software you build.
4. Does your project involve external partners?
5. Is your project distributed?
6. Do you tend to work from home, on-site, or both?
7. How would you personally characterize the way your project works?
8. What is the main role you occupy in your project?

B. Communication

9. How would you rate the relationship between your project's team and its customer?
10. How would you rate the quality of communication inside your team?
11. How would you rate the quality of communication between your team and other teams on the same project?
12. How often do members of your team meet, informally by chance meeting or in announced meetings?
13. How often is end user feedback provided?

C. Requirements Elicitation

14. How are the requirements elicited in your project?
15. Which techniques are employed to elicit requirements in your project?

D. Assumptions

16. If you are in a situation where you lack information and have to make an assumption to proceed in your project, what do you typically do?

E. Documentation

17. Suppose that you know that the only people who benefit from a document that you must produce are people other than the project's current members. Rate the following based on what best describes your behavior and thinking.
18. Which information do you explicitly document when dealing with requirements?
19. How do you document requirements?
20. Have you ever failed to document one or more requirements?
21. Check as many reasons for failing to document requirements that have applied in at least one circumstance.

F. Non-functional Requirements

22. Which classes of non-functional requirements do you explicitly consider in your requirements documentation?
23. How do you document each type of non-functional requirements selected in the previous question?

G. Requirements Analysis

24. Stated below are possible reasons for stopping the requirements analysis process and producing a requirements specification, capturing only what is known at the moment. Indicate your level of agreement or disagreement with the applicability of the reasons to your project

H. Requirements Validation

25. How do you align software testing with requirements?
26. How much do you agree or disagree with the following statements about your project?

I. Critical RE Problems

27. Considering your personally experienced problems stated in the previous question, which ones would you classify as the five most critical ones?

J. Problems Causes Effects

28. For each of the critical problems you selected in the previous question, describe what you believe caused the problem.
29. For each of the critical problems you selected in the previous question, describe what you believe are the implications of the problem.
30. Are there problems caused by humans other than the ones you listed in the previous questions? If so, describe them here.

K. Conclusion

31. Use this space to address any issue about RE that this survey has not addressed.
32. Please fill in this space with your e-mail address if wish to be notified of the results.
33. Please fill in this space with your e-mail address if you are willing to be interviewed to be asked follow-up questions.
